

ADDRESSING

Each panel should be given an address.

If the Floor is to work in unison (ie all one color)

Each panel can be addressed as Fixture #1 - Then DMX Channels 1,2,3, will change the whole floor any color.

TIP Then if you want just automatic sound to light - unplug the DMX cable

If more control is required...

Address one Row ~~to~~ Fixture #1, Row two fixture #2 etc.
OR Address each panel an unique fixture # (DMX start address - please see chart) and then each panel can be individually controlled.

See Manual for complete info.
